

**Following is a list of Pickens County properties around the shores of Lake Petit, that engineers have previously identified as being at risk** due to slides and foundational instability in the event of a rapid draining of the lake (*i.e. a failure, or a rapid drawdown in the event of a need to lower lake levels*).

**ALL of these properties were listed on the Emergency Notification List of previous Emergency Action Plans, but have currently been inexplicably removed from the 2022 EAP.** It is of note that a substantial number of Dawson County properties are also at risk, but are not included. Pickens County EMA has just been made aware of these issues, and has committed to alerting their Dawson County counterparts, and to inquiring of Big Canoe why this situation exists. Big Canoe itself continues to insist that Pickens EMA provided the property data. You can find it in the clear and plain language of the EAP.
